Services Provided: Managed IT services, VOIP, Software Development, Low Voltage Security & Cabling, SOC Security Services

Executive Summary:

This client was referred to Classic City Computing in 2012 to help support their day-to-day IT needs as well as incredible growth. This client went from a 3-person team to over 100 employees with multiple offices. This client has a complicated IT system which CCC delicately but expertly oversees and supports. This client has in-office workers, full remote workers, and a web of medical affiliate connections all over the United States.

Classic City Computing's IT experts helped plan for and execute systems and software to support the company's growth. This client has gone through M&A, yet the owners still keep CCC onboard to support the IT backbone. In the long term, this company is still a client of Classic City Computing and uses their services on a regular basis, including SOC security services. This company has locations across many states with many remote teammates. Classic City Computing's software developers assist them with custom reporting needs while their low voltage experts help the company with security systems and data cabling. The Classic City Computing team also helps them with quarterly IT audits and 3rd party compliance audits. The company is happy with the work Classic City Computing has completed for them and plan to continue to use their services moving forward.
